

# Big Data, organisation and analysis

Building a database connection II

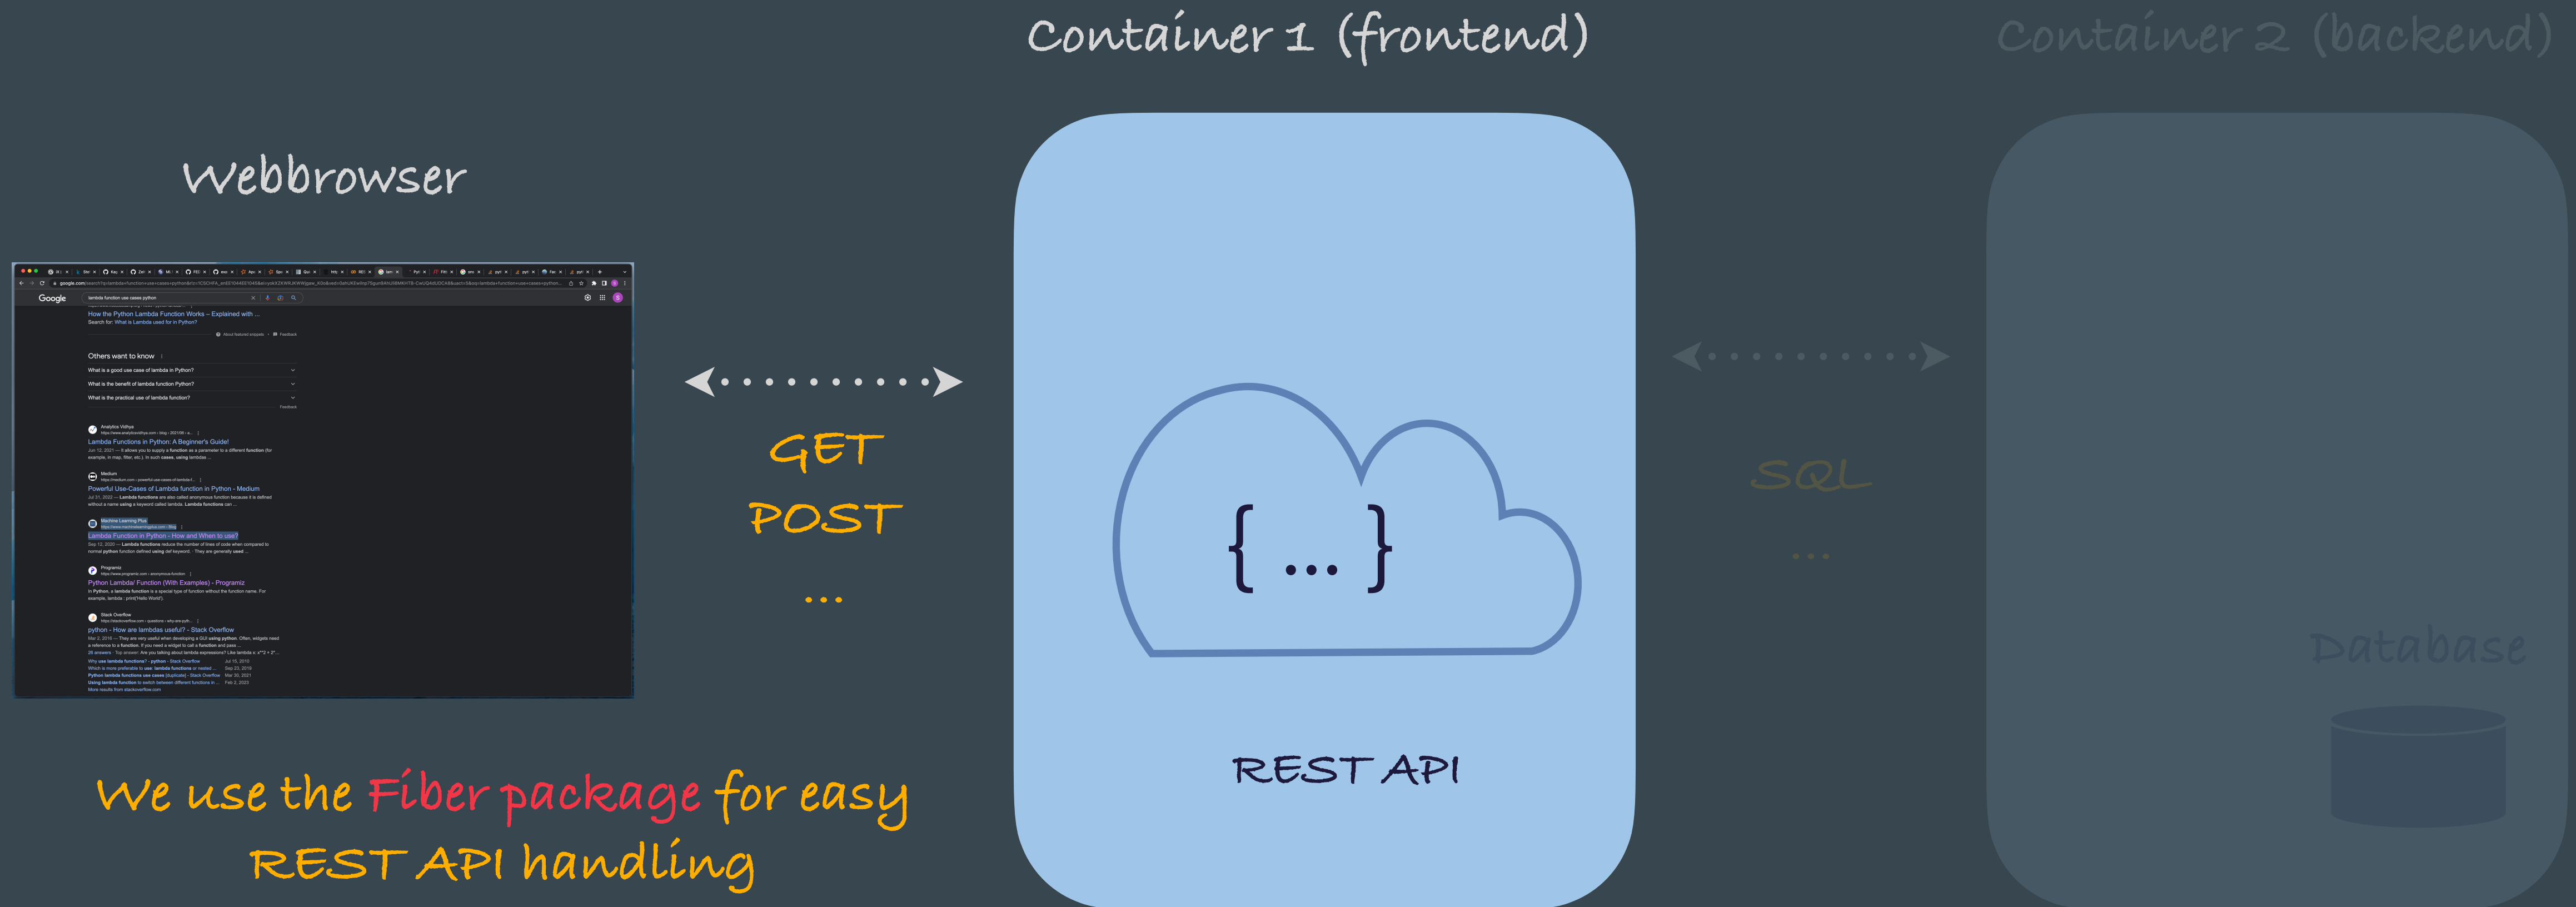

# Overall principle (remainder)

## Two container data pipeline

# Overall principle — What have we already done

## Two container data pipeline

**Problem:** every time we change something in the main.go file we need to restart the container

# Enabling automatic reload for Go apps

Handy tool while you are developing your app

- a tool to reload your app when a file in the project is changing
- it implements a runner package that takes care of all
- there is a "watcher" to detect changes in your directory and files
- there is a logger to give you feedback
